## LETTER OF TRANSMITTAL

DEPARTMENT OF COMMERCE,  
BUREAU OF THE CENSUS,  
*Washington, D. C., August 14, 1939.*

SIR: I transmit herewith part II of the report of the Census of Manufactures for 1937. This census, taken in 1938, is the ninth of the biennial series of censuses of manufactures.

The manufactures reports of 1937 comprise two volumes. Part I is primarily an assembly of the detailed reports for manufacturing and printing and publishing industries covered by the census; part II is an assembly of detailed reports for cities having 25,000 inhabitants or more and inventories in the hands of manufacturers at the beginning and end of 1937, by industries and States.

The statistics for a large number of the cities having 25,000 inhabitants or more could not be published because they would disclose the approximate operations of individual establishments. The cities are specifically referred to in this report, but no statistics are shown for them. The results were first published in the form of multilithed reports (134 in number).

The statistics were compiled and published under the supervision of Thomas J. Fitzgerald, Chief Statistician for Manufactures, and Howard H. McClure, Assistant Chief Statistician, assisted by Miss Mary T. Marsh, Chief of the Central Office Section.

The field canvass was under the supervision of E. K. Ellsworth, Chief, Field Division, and the machine tabulation work was under the supervision of George B. Wetzel, Chief, Machine Tabulation Division.

The compilation of the statistics published in this volume was made possible through an allocation of funds to the Bureau of the Census by the Works Progress Administration.

Respectfully,

WILLIAM LANE AUSTIN,  
*Director of the Census.*

HON. HARRY L. HOPKINS,  
*Secretary of Commerce.*

# BIENNIAL CENSUS OF MANUFACTURES; 1937

## PART II

Part II is devoted to (1) a presentation of statistics for cities having 25,000 population or more, by industries (the cities are arranged alphabetically by States and alphabetically by cities within the States); (2) a presentation of statistics of inventories in the hands of manufacturers at the beginning and end of 1937, by industries and by States. (See p. 120 for further explanations concerning inventories.)

Table 1 is devoted to statistics of cities by industries. This is the first census at which statistics on manufactures for cities having 25,000 population or more have been compiled and published since the census covering the year 1904, when statistics for industries were shown for cities having 20,000 population or more.

Statistics for industries were shown for cities having 20,000 population or more for the censuses covering the years 1899 and 1904. In the 1909, 1914, and 1919 censuses industries were shown for cities having 50,000 population or more. The presentation of statistics for cities by industries was limited to cities with at least 100,000 population in the biennial censuses for 1921, 1923, 1925, and 1927. Statistics were published for the same cities for the 1929 census as in 1927, providing it was possible to show statistics for the most important industry of the city without disclosing the approximate operations of an individual concern or providing that industries accounting for at least 50 percent of the wage earners of the city could be shown separately. Statistics by industries were shown for only 3 cities for the biennial censuses of 1931, 1933, and 1935, namely, New York, Chicago, and Philadelphia.

Table 2 is devoted to the presentation of inventories in the hands of manufacturers at the beginning and end of 1937 by industries, and table 3 gives inventories by States.

TABLE 1.—SUMMARY FOR CITIES HAVING 25,000 INHABITANTS OR MORE, BY INDUSTRIES, 1937, WITH COMBINED STATISTICS FOR ALL INDUSTRIES: 1937 AND 1935

[This table gives separate figures for each industry for which it is possible to publish such figures without disclosing, exactly or approximately, any data for individual establishments, and gives combined statistics for the remaining industries as a group ("Other industries"). Certain of the industries for which combined figures are given, however, reported larger numbers of wage earners or larger values of products than some of those shown separately. Because they account for a negligible portion of the national output, plants with annual production valued at less than \$5,000 have been excluded since 1919. These statistics refer only to establishments actually located within the boundaries of the respective cities. The cities are arranged alphabetically within the respective States.]

<sup>1</sup> Not including salaried officers and employees. The item for wage earners is an average of the numbers reported for the several months of the year. In calculating it, equal weight must be given to full-time and part-time wage earners (not reported separately by the manufacturers), and for this reason it exceeds the number that would have been required to perform the work done in the industries if all wage earners had been continuously employed throughout the year. The quotient obtained by dividing the amount of wages by the average number of wage earners cannot, therefore, be accepted as representing the average wage received by full-time wage earners. In making comparisons between the figures for 1937 and those for earlier years, the likelihood that the proportion of part-time employment varied should be taken into account.

<sup>2</sup> Profits or losses cannot be calculated from the census figures because no data are collected for certain expense items, such as interest, rent, depreciation, taxes, insurance, and advertising.

<sup>3</sup> The aggregates for cost of materials and value of products include large amounts of duplication due to the use of the products of some industries as materials by others. For the United States as a whole, this duplication amounted in 1929 (the latest year for which an estimate has been made) to about one-third of the gross value of products.

<sup>4</sup> Value of products less cost of materials, fuel, purchased electric energy, and contract work.

<sup>5</sup> The figures for 1937 are not strictly comparable with those for 1935 in all cases because in some industries for 1935 the cost of contract work is included with the cost of materials and in some cases it is not. The cost of contract work is included for all industries reporting contract work for 1937.

<sup>6</sup> As the 1937 statistics do not include data for "Gas, manufactured, illuminating and heating," nor for "Railroad repair shops," the 1935 figures for cities will not, in all cases, be strictly comparable as no revisions of the 1935 figures have been made.

<sup>7</sup> Detailed statistics are withheld to avoid disclosing approximations of data for individual establishments.

<sup>\*\*</sup> As the 1937 statistics do not include data for "Gas, manufactured, illuminating, and heating," nor for "Railroad repair shops," the 1935 figures for this city have been revised by deducting the data for these industries.

a, b, c, d, and e. In order to avoid disclosing exact or approximate data for individual establishments, the figures for certain establishments located outside the city have been included in the respective items for the industries to which these footnotes are indexed. The numbers of establishments in question are indicated below.

a, 1 establishment; b, 2 establishments; c, 3 establishments; d, 4 establishments; and e, 5 establishments.

## INVENTORIES IN THE HANDS OF MANUFACTURERS AT THE BEGINNING AND END OF 1937

This is the first time at any census of manufactures that questions concerning inventories in the hands of manufacturers have been asked. All 1937 Census of Manufactures schedules except those for printing and publishing and allied industries carried inventory questions, one concerning (a) the finished products and contract work done on materials owned by the manufacturer reporting, and the other covering (b) materials, supplies, fuel, work in process, and all other inventories. Establishments whose value of products amounted to \$54,768,239,167, or 94.6 percent of the total value of products reported to the 1937 Census of Manufactures, indicated that they did or did not have inventories at the beginning and end of that year, that is, they reported satisfactorily. The remaining 5.4 percent failed to report inventories satisfactorily.

A considerable number of the respondents who reported inventories reported a single inventory figure, combining (a) and (b) above. If after correspondence no separation could be made by the respondent, the total inventory was tabulated either as (a) finished goods inventory or as (b) goods in process, etc., inventory, depending on how inventories in that particular industry were generally reported. Because a number of respondents said they could not report finished products inventories and other inventories separately, the total inventory figures are accordingly more complete than either (a) or (b).

TABLE 2.—SUMMARY OF INVENTORIES IN THE HANDS OF MANUFACTURERS AT THE BEGINNING AND END OF 1937

[Statistics on inventories were not collected for any of the industries in the printing and publishing group with the exception of the engraving, chasing, etching and die sinking industry, nor were inventory statistics collected from contract shops classified in the textile and miscellaneous industry groups. The value of products of those industries for which inventory data were not collected, amounting to \$2,738,873.024 were not therefore considered in determining the proportion of the total value of products represented by establishments for which satisfactory inventory data were reported.]

<sup>1</sup> Includes the value of goods produced by contract work on materials owned by the manufacturers reporting.

<sup>2</sup> Includes the value of fuel, work in process, and all other inventories.

<sup>3</sup> Includes the value of products of establishments reporting no inventories on hand.

<sup>4</sup> Inventory data were collected for only the "engraving, etching, and die-sinking" industry of the printing, publishing, and allied industries group.

<sup>5</sup> Statistics for railroad repair shops were not collected in the 1937 census of manufactures.

TABLE 3.—SUMMARY OF INVENTORIES IN THE HANDS OF MANUFACTURERS AT THE BEGINNING AND END OF 1937, BY GEOGRAPHIC DIVISIONS AND STATES

[Statistics on inventories were not collected for any of the industries in the Printing and Publishing Group with the exception of the Engraving, Chasing, Etching, and Die-sinking industry, nor were inventory statistics collected from contract shops classified in the textile and miscellaneous industry groups. The value of products of those industries for which inventory data were not collected, amounting to \$2,798,873,024 were not therefore considered in determining the proportion of the total value of products by establishments for which satisfactory inventory data were reported.]
